COMPETENCIES

- Languages: C / Python
- Web Development: SQL / HTML / CSS / JavaScript
- Algorithms & Data Structures
- Tools and Development Environments: Git / GitHub / Visual Studio / VS Code / Jupyter
- Operating Systems: Linux / Windows
- Microsoft Office

INTERESTS

- Passion for foreign cultures
- Travel
- Volunteering

PROFESSIONAL SUMMARY

Currently in the first year at **ENSISA (École Nationale Supérieure d'Ingénieurs Sud-Alsace)**, specializing in **Computer Science and Networks**, I am looking for a **4 to 6-week internship**, with a strong interest in continuing with an **apprenticeship** if the opportunity arises. Enthusiastic, determined, and highly motivated, I aim to **develop my skills** and **apply my theoretical knowledge** in a professional setting. Curious and dedicated, I am eager to **explore the professional world**, gain valuable experience, and **actively contribute** to your team's projects.

FORMATION

National Graduate School of Engineering, Sud-Alsac : Computer and Network Engineering, 2025 – 2028
ENSISA – Mulhouse, France

Preparatory Program for Engineering Schools (CPGE) : Mathematics, Physics and Engineering Sciences, 2023 – 2025
Lycée Ibn al-Ghazi – Rabat, Morocco

Baccalauréat international : Mathematical Sciences, Engineering Sciences, 2022 – 2023
Highschool Madariss Maria – Morocco

PROJECTS

- **Website Portfolio** – Created a personal website (<https://arij2005.github.io/Portefolio/>) to showcase my academic background, skills, projects, and professional interests.
- **Algorithms and Programming Project (C)** – Modeled a transportation network as a graph, implemented graph traversal algorithms (Dijkstra), used dynamic data structures, sorted stations by degree, and developed a command-line interface.
- **Centralized Chat Application** – Designed and developed a full-stack web application with Django (Python) and JavaScript, including user registration and login, creation of multiple chat rooms, dynamic message refresh via AJAX, and management of user permissions and moderation features.
- **Mathematics and Signal Processing Project (Python)** – Analyzed meteorological data (1950–2024), conducted statistical and temporal signal analysis, and identified annual and multi-year cycles.
- **September 2025 – Early Year Immersion Project** – Collaborated in a group of eight to design and develop a board game based on predefined rules. Personally contributed to the AI development (decision logic for automated players).

- **2024–2025 TIPE – Preparatory Classes** – Conducted physical and mathematical modeling of a two-body wave energy generator inspired by the PB3 PowerBuoy model, performed dynamic and frequency analysis, and optimized mechanical parameters to maximize wave energy capture. Simulations were implemented in Python using the Anaconda environment.
